TOHEEB A. HUSAIN

Cloud Security Engineer | DevSecOps | Detection Engineering

toheeborelope@gmail.com | +44 7508 859056 | Northampton, UK | toheebahusain.com | LinkedIn | GitHub

PROFESSIONAL PROFILE

Cloud Security Engineer with hands-on experience in Microsoft Sentinel, KQL detections, cloud identity security and incident investigation across project, internship and volunteer settings. Built SIEM/SOAR workflows in Azure, applied security controls across AWS and Kubernetes, and developed an explainable phishing-detection research prototype combining machine learning and threat intelligence. Brings Python/API development, MITRE ATT&CK mapping and infrastructure-as-code skills, with a focus on evidence-led investigation and security automation.

CORE SKILLS

Detection & SOC: Microsoft Sentinel, Defender XDR, KQL, Chronicle SIEM/SOAR, Azure Logic Apps, Incident Triage, Detection Engineering, MITRE ATT&CK, IOC Analysis, Sigma Rules, Malware/Phishing Analysis

Cloud Security: Azure, Microsoft Entra ID, AWS, GCP, Kubernetes, IAM, RBAC, Least Privilege, CSPM, Cloud Risk Assessments, Audit Logging

AI & Machine Learning: Phishing Detection, Model Evaluation, False-Positive Trade-offs, SHAP Explainability, VirusTotal Integration, Python, FastAPI, REST APIs

DevSecOps & AppSec: OWASP Top 10, STRIDE, SAST (SonarQube), Trivy, Checkov, Cosign, SBOM, Secrets Management (Vault), OPA Gatekeeper

Automation & IaC: Terraform, GitHub Actions, OIDC, Docker, Falco, Grafana, Python, PowerShell, Java, JavaScript, Git

WORK EXPERIENCE

Volunteer Cyber Responder - The Cyber Helpline

Jun 2026 - Present

- Support individuals and small businesses experiencing live cybercrime incidents, managing intake and case tracking through Zendesk.
- Apply structured triage and incident-response fundamentals, document case information and communicate practical guidance in a time-sensitive support environment.

Cloud Security Analyst Consultant - Amdari

Nov 2025 - Sep 2026 | London, UK

- Completed project-based cloud security engagements across AWS and Azure, covering IAM, SIEM/SOAR, infrastructure governance and security automation.
- Designed Microsoft Entra ID / Azure RBAC models enforcing least privilege; demonstrated admin onboarding in under 5 minutes in the project environment.
- Built a Microsoft Sentinel proof of concept integrating Azure Activity, Defender for Cloud and Entra ID telemetry; developed KQL detections for privilege escalation and suspicious sign-ins.
- Deployed Terraform-managed cloud infrastructure with OIDC-based CI/CD, KMS encryption and approval gates for controlled infrastructure changes.
- Hardened Kubernetes project environments using OPA Gatekeeper, Falco runtime detection, Vault secrets injection and Cosign image signing.

Cyber Threat Intelligence Analyst Intern - CSFI

May 2025 - Feb 2026

- Produced actionable intelligence reports using MITRE ATT&CK, D3FEND and the Cyber Kill Chain; mapped adversary TTPs to inform defensive priorities.
- Analysed 50+ phishing domains and enriched threat intelligence through IOC analysis, OSINT and malware sandbox investigation.
- Collaborated on RFIs and presented findings to stakeholders; awarded the Daria-Romana Pop Award for Best Intern.

KEY PROJECTS

Anti-Phish AI: Explainable Phishing Detection - Dissertation Project *2026*

- Built a research prototype connecting a Chrome extension, FastAPI detection service and Next.js dashboard; combined machine-learning predictions with VirusTotal threat intelligence.
- Prepared a balanced dataset of 790,852 URLs and compared six model families; investigated probability calibration, SHAP explanations and false-positive trade-offs.
- Presented model confidence, reputation findings and explanation factors to support review; evaluated standalone models on held-out data and demonstrated browser warnings.

Cloud Threat Detection & Automated Response - Microsoft Sentinel *2026*

- Centralised Azure Activity, Defender for Cloud and Entra ID telemetry in Log Analytics; built KQL analytics rules for suspicious sign-ins and out-of-hours privilege changes.
- Automated incident notifications and response workflows with Azure Logic Apps; used reusable Terraform templates to support consistent, version-controlled deployment of the proof of concept.

SecureFlow: End-to-End DevSecOps Security Platform *2026*

- Identified and remediated 40+ vulnerabilities in a simulated cloud-native banking platform; mapped findings to OWASP Top 10 and the STRIDE threat model.
- Integrated SonarQube, Gitleaks, Trivy and Checkov with a risk-based CI/CD Security Gate to block critical findings before deployment.
- Implemented Vault secrets injection, Kubernetes policy controls, Falco/Grafana runtime monitoring and Cosign/SBOM supply chain controls.

AWS IaC & CI/CD Governance *2025*

- Converted manual AWS project infrastructure to Terraform and GitHub Actions with OIDC authentication, approval gates and an auditable plan-to-deployment change trail.

SigmaHQ Open-Source Contributor *2025*

- Authored and merged a Sigma detection rule (PR #5801) for Invoke-DNSExfiltrator, contributing DNS exfiltration detection coverage to the global SigmaHQ repository.

EDUCATION

BSc (Hons) Computer Science - First Class
University of Northampton | 2022 - 2026

CERTIFICATIONS

Earned: AWS Solutions Architect Associate; Microsoft SC-200 (Security Operations Analyst Associate); CompTIA A+; Google Cloud Cybersecurity Certificate; Microsoft Azure AI Fundamentals (AI-900); arcX Foundation Threat Intelligence Analyst

In Progress: CompTIA Security+; Blue Team Level 1 (BTL1)

AWARDS & LEADERSHIP

- Daria-Romana Pop Award - Best Intern, CSFI
- 2nd Place, Elevate Great AI Competition (£2,500) - Team Lead, SensoryNeural AI + IoT project
- Assistant Team Lead, CSFI (volunteer); AI Society Volunteer, University of Northampton
