PERSONAL PROFILE

Computer Science undergraduate with hands-on experience in cybersecurity threat intelligence, vulnerability management, risk assessment, system design, and full-stack development. Recognised for leadership, problem-solving, and resilience.

EDUCATION

University of Northampton (UON)

Northampton, UK

Bachelor of Science in Computer Science

2022 - 2026

Relevant Modules: Data Structures and Algorithms, Modern Databases, Web Development, Operating Systems, Computer Networking, Mobile Application Development, Advanced AI and Applications.

Grade: First Class (Expected)

CERTIFICATIONS

- CompTIA A+
- Microsoft Certified: Azure AI Fundamentals
- arcX: Foundation Level Threat Intelligence Analyst
- Make Foundation

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, C++, PHP, SQL, HTML5, CSS3

Framework & Libraries: React, Next.js, FastAPI, Spring Boot

Tools & Platforms: Docker, Git, AWS, Azure

Databases: MySQL, Oracle SQL

Concepts & Methodologies: RESTful API Design & Development, Object-Oriented Programming (OOP), Agile/Scrum, System Design, CI/CD

Soft Skills: Project Management, Technical Leadership & Collaboration, Analytical Problem-Solving, Effective Communication & Technical Writing, and Curiosity & Continuous Learning.

PROJECTS EXPERIENCES:

J.P. Morgan Software Engineering Virtual Experience Program

- Completed hands-on simulation tasks covering Spring Framework, Java programming, SQL databases, and REST API development.
- Integrated Apache Kafka message queuing with Spring Boot services to process and persist transaction data in real-time.
- Implemented H2 in-memory database and Spring Data JPA repositories for secure data storage and retrieval.
- Developed and tested REST API endpoints (GET/POST) to support incentive and balance operations within the Midas Core system.
- Applied debugging, dependency injection, and transaction management principles to ensure reliable service execution.
- Simulated real-world financial backend operations, demonstrating software engineering practices used at J.P. Morgan Chase & Co.

SensoryNeural – AI-Powered Sensory Support System (Team Lead / Co-Creator)

- Elevate Great AI Competition (2nd Place, £2,500 Prize) London, UK January. 2025 – July 2025

- Architected the system with a core ethical AI framework, implementing explainable AI dashboards for caregiver transparency and robust data anonymization to ensure compliance with GDPR and the EU AI Act from the initial design phase.
- Engineered a real-time IoT integration hub to dynamically modulate environmental stimuli such as smart lighting and noise-cancellation based on AI-predicted stress triggers, creating a seamless, adaptive sensory-safe zone for the user.

Personal Financial Management

- Developed a full-stack application with a Spring Boot REST API backend and an Angular frontend, implementing secure CRUD operations to manage financial data stored in MySQL.
- Built an interactive Angular dashboard with dynamic charts and graphs to visualize financial trends, providing users with real-time, actionable insights into their spending.

Database Management System

- Engineered a school database system in Oracle SQL, leveraging Entity-Relationship modelling to optimize schema design. This resulted in a 30% increase in data retrieval efficiency and more effective data organization.

WORK EXPERIENCE

Cyber Security Forum Initiative (CSFI), Cyber Threat Intelligence (CTI) Analyst Intern July 2025 – August 2025

- Delivered actionable intelligence reports leveraging MITRE ATT&CK, D3FEND, and the Cyber Kill Chain to strengthen cyber defense strategies.
- Conducted OSINT-based threat hunting to identify IOCs and emerging trends.
- Collaborated with team members on RFIs, presenting findings to key stakeholders.
- Analysed 50+ phishing domains and mapped TTPs to MITRE ATT&CK framework.
- Built indicators of compromise (IOCs) from malware sandbox analysis and contributed to threat feed enrichment.

Mail Sorter, Angard Staffing (Royal Mail) Midland Super Hub, Northampton Sep 2023 – Present

- Recorded and analysed truck flow statistics, providing data-driven insights to optimise logistics and improve operational efficiency.
- Demonstrated leadership by coordinating team activities and fostering a collaborative, productive work environment.

AWARDS & HONORS

- **Daria-Romana Pop Award:** Honoured by the Cyber Security Forum Initiative (CSFI) with the Best Intern Award of my cohort, recognising my contributions during the internship.
- Self-financed my university education while excelling in coursework, demonstrating strong time management, resilience, and commitment to personal and academic growth.

VOLUNTEERING

Cyber Security Forum Initiative (CSFI), Assistant Team Lead September 2025 – Present

- Supporting the team in coordinating CTI tasks and mentoring interns.
- Assisting with project planning and reviewing threat analysis reports.
- Continuing contributions to CSFI's mission on a volunteer basis.

AI Society Volunteer, University of Northampton September 2023 – Present

- Contributing to workshops on AI trends, machine learning and collaborating on AI-driven research projects.
- Co-Led a dedicated Discord channel to centralise and share AI-related opportunities (internships, competitions, workshops), increasing member participation and awareness.
